

ROMAN BLIND - MEASURING FOR A BLIND FITTED TO THE CEILING

For a blind fitted to the ceiling, the width of the blind is the width of the window recess plus 5-10 cm added on each side.

The length of the blind is the length from the window sill or the floor to the ceiling.

When measuring for a blind, please remember that an open blind is around 35-35 cm long, so fitting it around 30-35 cm above the top edge of the window will allow for easy opening of the window when the blind is fully open.
