

- 1.** Using screws and rectangular nuts, fix the roller brackets (A) to the window frame brackets (B). If the window is fitted with a ventilator, fix the elements (A) as low as possible in relation to the elements (B).

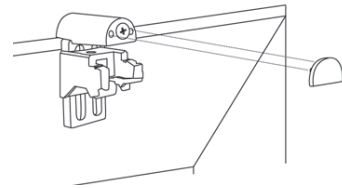

- 2.** Place the joined brackets on the window sash frame.

- 3.** Tighten the bracket gently to the window frame with a screwdriver.

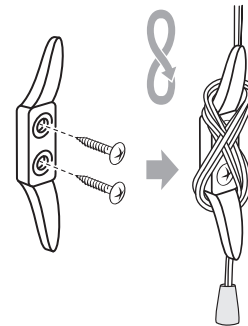

- 4.** Put on a cap.

- 5.** Insert the roller blind rail from above, gently pressing its bottom edge towards the window until you hear the characteristic click.

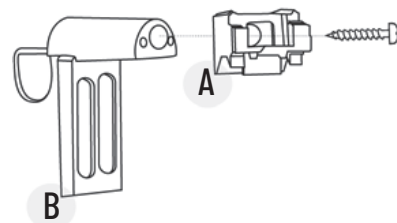

- 6.** To prevent the cord from hanging loosely near the window, it is recommended to install a special safety hook. Mount it on the correct side of the blind at a convenient height.

A different way of mounting

It is also possible to mount the blind so that it protrudes further from the window (approximately 5 cm). Remove the screw from the window frame holder (B) and use it to tighten the blind holder (A) to the window frame holder (B).

WARNING!

Danger of suffocation!

Keep cords and chain loops out of the reach of small children!

There are small parts in the package!

The child may swallow and choke on small parts!
